

Content

Introduction	7
1 Literature review	9
1.1 Nutritional value of meat	10
1.1.1 Chemical composition of meat	11
1.1.2 Water in meat	13
1.1.3 Meat proteins	14
1.1.4 Fat content in meat	16
1.1.5 Extractive substances	22
1.1.6 Carbohydrates in meat	23
1.1.7 Minerals in meat	23
1.1.8 Vitamins in meat	24
1.2 Meat maturation, postmortal changes in meat	24
1.2.1 Phase before the beginning of rigor mortis	25
1.2.2 The rigor mortis phase	25
1.2.3 Meat maturity phase	26
1.2.4 Dry-cured meat typical processing and maturation	26
1.3 Factors influencing the proteolytic activity	30
1.3.1 Determination of biogenic amines content	36
1.4 Meat production technology	40
1.4.1 Basic technological processes of production of salted meat	40
1.4.2 Salt penetration factors effect:	41
1.4.3 Meat salting	41
1.4.4 Smoking the meat	42
1.5 Degradation of meat lipids	43
2 Aim of the work	45
3 MATERIAL AND METHODS	46
3.1 Material used	46
3.2 Experiments performing	46
3.3 Methods for the determination of physical-chemical indicators	47
3.3.1 Determination of humidity, fat, amino acids, proteins, fatty acids (FTIR method).	47
3.3.2 Determination of the salt content by the Mohr titration method	48
3.3.3 pH analyses	48
3.3.4 Determination of peroxide number by titration method (STN ISO 3960: 2001).....	48

3.3.5 Determination of acid value by titration method (STN 58 0100).....	49
3.3.6. Extraction of fat from the sample to determine the peroxide number and acid value (so-called cold fat extraction)	50
3.3.7 Determination of malondialdehyde (MDA) spectrophotometrically.....	50
3.3.8 Determination of total volatile nitrogenous bases (TVB-N) by vapor deposition and subsequent titration (Commission Regulation (EC) No 2074/2005).....	51
3.3.9 Determination of colour of meat by spectrophotometry	51
3.3.10 Sensory analyses	52
3.3.11 Analyses of polycyclic aromatic hydrocarbons	52
3.3.12 Statistical analysis.....	54
4 Results and discussion.....	55
Conclusion.....	93
Bibliography.....	94
Abstract	107
Abstrakt.....	110
